QUESTIONS OR NEED HELP WITH A TRUSS REPAIR?

For the fastest review, submit a marked-up Truss Design Drawing (TDD) and supporting photos through the repair request form using the QR code below or visiting the website A1industries.com/repairs

A COMPLETE REPAIR REQUEST INCLUDES:

1. **Mark the TDD** included with the delivery to clearly show the issue or damaged area.
2. **Identify** the Truss ID, Project ID, Lot or Building #, and any other details needed to confirm the correct truss.
3. **Attach clear photos** whenever possible. Photos alone are typically not enough; the marked-up TDD must be included with field pictures.
4. **Note special field conditions**, such as sheathing or installed trades, and provide dimensions of damage or obstructions where applicable.

IMPORTANT: Do not modify or repair any truss until you have spoken with A-1 Industries and received directions.

FIELD-BUILT TRUSSES: These are considered conventional framing and fall under the Engineer of Record (EOR). A-1 cannot provide sealed drawings for field-built trusses.
